

Zip-Codes.com Database Integration

Last Modified on 01/22/2020 10:47 am EST

When you [import ZIP code data](#) into aACE, the data can be used to auto-populate tax profiles, connect clients in a given location with their local sales rep, correctly format addresses, and more.

However, ZIP codes are proprietary data, so a license is required. For ZIP code databases with U.S. demographics, we recommend using a licensed distributor of U.S. postal code data: zip-codes.com. From their homepage, navigate to US Zip Code Database and review your package options. We recommend the Standard package.

After you purchase a package, you are immediately able to download a ZIP code database. Send this file to your aACE representative for integration with your aACE solution. After the import, you can manage postal code formatting, tax profiles, and sales reps by navigating to **System Admin > Postal Codes**.

The screenshot shows a web application window titled "Postal Codes" with a toolbar containing "New", "Edit", "Delete", "Print", and "Actions". Below the toolbar, the page title "Postal Codes" is followed by "Unsorted". A search icon is visible on the right. The main content is a table with the following columns: Postal Code, City, County, State, Country, Country Code, Postal Format, Tax Profile, Sales Rep, Account Manager, and Territory. The table contains 20 rows of data, all with "MA" as the state and "US" as the country. At the bottom left, there are links for "Show All" and "Related Records".
