

Setting Up WooCommerce

Last Modified on 03/11/2021 11:23 am EST

This guide explains how to connect your aACE system to a WooCommerce account. It is intended for system administrators.

Step 1: Create a WooCommerce Website

Follow the [WooCommerce documentation](https://docs.woocommerce.com) (<https://docs.woocommerce.com>) to create your ecommerce site.

Note: The aACE+ WooCommerce integration has been verified using a standard WordPress and WooCommerce installation. Non-standard installations, certain web store customizations, and the use of plug-ins may impact the functionality of the integration. This may require the integration to be customized, which will be covered only as part of a current support agreement.

Step 2: Enable the API

The aACE+ WooCommerce integration utilizes the WooCommerce REST API v2.

1. Log into your WordPress dashboard.
2. In the left-hand panel, navigate to **Users**.
3. Create a new user:
 - Username: **aACE**
 - Grant privileges: **Read and write**
4. In the left-hand panel, navigate to **WooCommerce > Settings > Advanced > Page setup > REST API**.
5. Click **Add Key**:
 - Description: **aACE**
 - User: **aACE**
 - Permissions: **Read/Write**
6. Click **Generate API Keys**.
7. After the API credentials are generated, note the Consumer Key and Consumer Secret for use in the next step.

Step 3: Input Credentials into aACE

Install the Integration

Obtain and [install the correct integration](http://aace5.knowledgeowl.com/help/installing-integration-files) on your FileMaker server.

Configure the Integration

1. Log into aACE and navigate to **Menu > System Admin > Preferences > Database Management**.
 2. In the Integrations section, mark the flag for **eCommerce Integration**.
 3. Next to eCommerce Integration, click **Open Settings > WooCommerce**.
 4. Mark the flag to **Enable WooCommerce**.
 5. Enter additional credentials you noted previously:
 - URL of your web store
 - Consumer Key
 - Consumer Secret
 6. Click **Test**.
 7. Optionally, enter a Minimum Creation Date.

Note: When the eCommerce Integration schedule is enabled, by default *all* WooCommerce orders will download into aACE. If you do *not* want this to occur (e.g. the web store was in operation prior to aACE implementation and only recent orders should be downloaded), then enter a timestamp here – aACE will only download orders created *on or after* this date.
 8. Close the eCommerce Integration Settings window.
 9. Navigate to **Menu > System Admin > Preferences > Automation Schedules**.
 10. Mark the flag for **eCommerce Integration**.
 11. Click **Commit Updates**.
